

Our web-based credential management solution will allow your entire organization **Universal, Paperless Standardized & Secure** access to all your credentials. Our *One Source* application can be utilized to manage multiple types of personnel that provide service within your organization; including employees, outside service providers, sales personnel, or anyone requiring specific credentials in order to perform their work or have access, all in **ONE** Standardized Universal Format.

### ***What Your File Tracker can do for your Organization?***

**1) Improved Efficiency:** *YFT provides your organization with the means to effectively manage credentials faster and more effectively than ever before. With our at a glance identifier Icons, administrators can determine literally in seconds who is compliant, and if not what is expired or missing. End users can access and monitor their own licensure and certifications, and administrator can instantly view and download licensure, certifications and training certifications, as well as track and automatically send notifications for pending expirations, via email & MMS.*

**2) Increased Compliance/Reduce Risk:** *YFT is your start to finish source for credential management for all types of personnel. YFT assures that all your personnel meet Department of Health and TJ regulatory requirements and can easily demonstrate that compliance from anywhere with our unique Audit Trail capability.*

**3) Standardize Personnel file format:** *Have one universally accessible and standardized personnel file for everyone- employees, temporary staff, and product sales representatives. You can also customize your personnel file to meet your own facility or even department specific requirements.*

**4) Reduced Cost:** *YFT is Software as a Service (SaaS), login and go! There is no expensive hardware to purchase & maintain, or software to develop. Automatic software updates and initial in-house training are also included.*

**5) Web Based/Paperless:** *SAFE, SECURE & REDUNDANT! our paperless web- based system can create & provide a complete electronic personnel file, accessible 24 hours a day, from office, home, or when on the go. Eliminate those stacks of personnel files! Have all your credentials a few clicks away on your mobile device.*

We are looking to form lasting partnerships with our training facility clients to provide an **Environmentally Friendly**, paperless system for credential management! Ask how to turn this compliance solution into a revenue stream for your company.

***Your File Tracker- Compliance Made Simple!***

## **Overview of YFT (Your File Tracker) SaaS VS Traditional Software applications**

### **Automatic Updates and Feature Enhancements**

Because YFT is 100% web-based, you benefit from reduced capital expenditures for hardware purchases. YFT *One Source* software program is a premier credentialing management solution that will allow you to simply login and go. Program updates are done automatically. New features and enhancements are ongoing and included in the service. YFT also operates on the latest cloud platform with 99% Up Time and adheres to stringent security, reliability and performance standards — all at a price you can easily afford.

### **24/7 System Management**

You will also receive complete post-sale system administration, maintenance, upgrades, technical support, and other services to ensure YFT is always operating at an optimal level.

### **Fixed Costs**

Included as a Service Package, our software has no hidden costs or unexpected additional fees to add credentialing criteria or add certifications. With YFT your costs are fixed on an annual basis.

<b>Web-Based YFT Solutions</b>	<b>Traditional Client/Server Applications</b>
<b>Required software:</b> Web browser <b>Benefit:</b> No additional costs or IT resources required.	<b>Required software:</b> Application software on laptops/desktops and server software on centralized servers.
<b>Additional hardware:</b> None <b>Benefit:</b> No additional costs or IT resources required.	<b>Additional hardware:</b> Typically requires the purchase, installation, and maintenance of additional software and hardware to support the application.
<b>Upgrades:</b> Transparent and automatic - providing all users with new features without any additional effort. <b>Benefit:</b> No additional costs or IT resources required.	<b>Upgrades:</b> IT/end user installation requiring additional time and expense.
<b>Access:</b> 24/7 Anytime – Anywhere access - Your data is securely accessible from any machine that has web access. <b>Benefit:</b> Fulfill customers' needs from anywhere.	<b>Access:</b> Only available when user has access to their own machine.
<b>Data:</b> Always up-to-date. Synchronization happens in real-time giving all users the most updated data constantly. <b>Benefit:</b> Always work with the most up-to-date information.	<b>Data:</b> Users often manage a local copy of the data on their desktop. The most up-to-date data is available only after users complete a synchronization process.
<b>Data Reliability:</b> Application/data hosted in a high-speed data center that is supervised 24 hours a day, 365 days a year. Redundancy is built in to every component of the architecture to ensure against hardware failures and data is backed up every day. Computers are in a physically secure location and utilize the latest in SSL encrypted technology. <b>Benefit:</b> Continuous access to data and peace of mind that your data is secure.	<b>Data Reliability:</b> Cost of building a world class, highly reliable, secure data center is extremely high – many companies cannot afford to invest in this level of security and redundancy.

**Bottom Line---**Cloud Based Solutions deliver the lowest total cost of ownership, while providing you with optimal features and optimal performance.
